

# SRH-L Mini series pallet Li-Ion

With capacities of 1,500 to 2,000 kg

The SRH Series 1.5t & 2t Mini Lithium-ion Pallet Trucks have been redesigned and have a slick modern industrial design appearance. The ultra-smooth lines and compact profile reflect ultra high tech design with special attention to the ergonomics

### **Maintenance**

The battery indicator prompts the user to charge the battery.

Easy engine access is very convenient for the maintenance of the entire machine. All rotating shafts are equipped with a lubricating sleeve and oil cup, which is convenient for maintenance

# Safety

The SRH Series 1.5t & 2t Mini Lithium-ion Pallet Trucks have been redesigned and have a slick modern industrial design appearance. The ultra-smooth lines and compact profile reflect ultra high tech design with special attention to the ergonomics

The modular tiller is simple but reliable, All parts inside can be replaced separately and all operations can be performed single handedly

Easy battery access and exchange

Beautifully moulded with sleek compact design for effortless operation and use in confined spaces

The upright-tiller running function allows continuous operation in confined spaces like containers

The charger is compact and easy to store

Ultra smooth and amazingly quiet the SRH series mini walkie pallet truck has a 6 hour battery life with ultra fast charge

technology.

# The upright-tiller running function allows continuous operation in confined spaces like containers AzoS Hammer

## High performance

A generous 6-hour battery life ensures even the most demanding warehouses can operate unhindered.

A permanent magnet travel motor ensures excellent performance attributes and low heat emissions. Lower heat = better performance and longevity.

The latest CURTIS permanent magnet control system offers excellent,

high-efficiency, and stable control performance.

Ultra hi-tech regenerative braking improves safety and reduces slipping on slopes significantly. The fork truck uses quality components from leading manufactures worldwide including controllers, hydraulic power packs, switches, plug connectors, and other important parts.

The battery can be fully charged in 2 hours thanks to ultra-fast charging technology, and the life of the battery cells has been improved up to 1200 cycles using combination technology. This offers offer excellent performance and reliability, the hallmark of the

### **Comfort**

Relentless R&D and a real quest to design the ultimate fork tuck has resulted in a design and structure that's optimised for operator comfort and safety. The design takes into account the need to monitor a load visually from all angles.

A super compact design ensures flexiblity and extremely easy and convenient operation and the upright-tiller running function allows work within confined spaces such as containers and other very small areas.

A standard fork height of 80mm and a guiding device is added to facilitate access and exit of pallets (including closed-deck pallets). The battery is easily removed via the side of the truck and features a small volume compartment.

Easy charging is achieved without removing the battery out from the truck.

# Reliability

A three-point support design has been used with a side support system providing safety and stability.

An optimised design on the lifting rod ensures there is a very small force applied to the bearings ensuring longer life and better reliability.

All plug connectors are waterproof, and wires and cables protected, which increases the reliability of the electrical system.

The cutting-edge hydraulic power unit features low noise, low vibration, and a stable and reliable rising and lowering action.

Stamping moulded forks have higher strength and impact resistance, with even higher working efficiency coupled with the forktip guiding function.

The interlock switch is a non-contact proximity switch and extremely reliability.

A one-piece iron wheel hood offers superior truck body protection against impacts.
