ECH SERIES

The new CVS ECH series deliver 10 tonne capacity all the way up to maximum lifting height, both with single or double stack spreaders. Driver productivity is boosted by our exclusive Stack Height Selector paired with the unique Drive Optimizer - all this on a machine with the best intrinsic stability in the market. In conclusion the new ECH range from CVS FERRARI is unsurpassed in its sector.

The single stack spreader of the new CVS FERRARI ECH lift truck range is the latest generation of our well proven design. Now featuring a double mechanical and electric safety feature for the twist-locks and a new "all weather proof" electric system built around vibration resistant components, it is fitted with full LED lighting both for handling area illumination and for attachment status indication. Our unique infinitely proportional side-shift control makes sharp and precise container handling easier in any operational conditions.

THE ULTIMATE DOUBLE STACK TECHNOLOGY

ECH

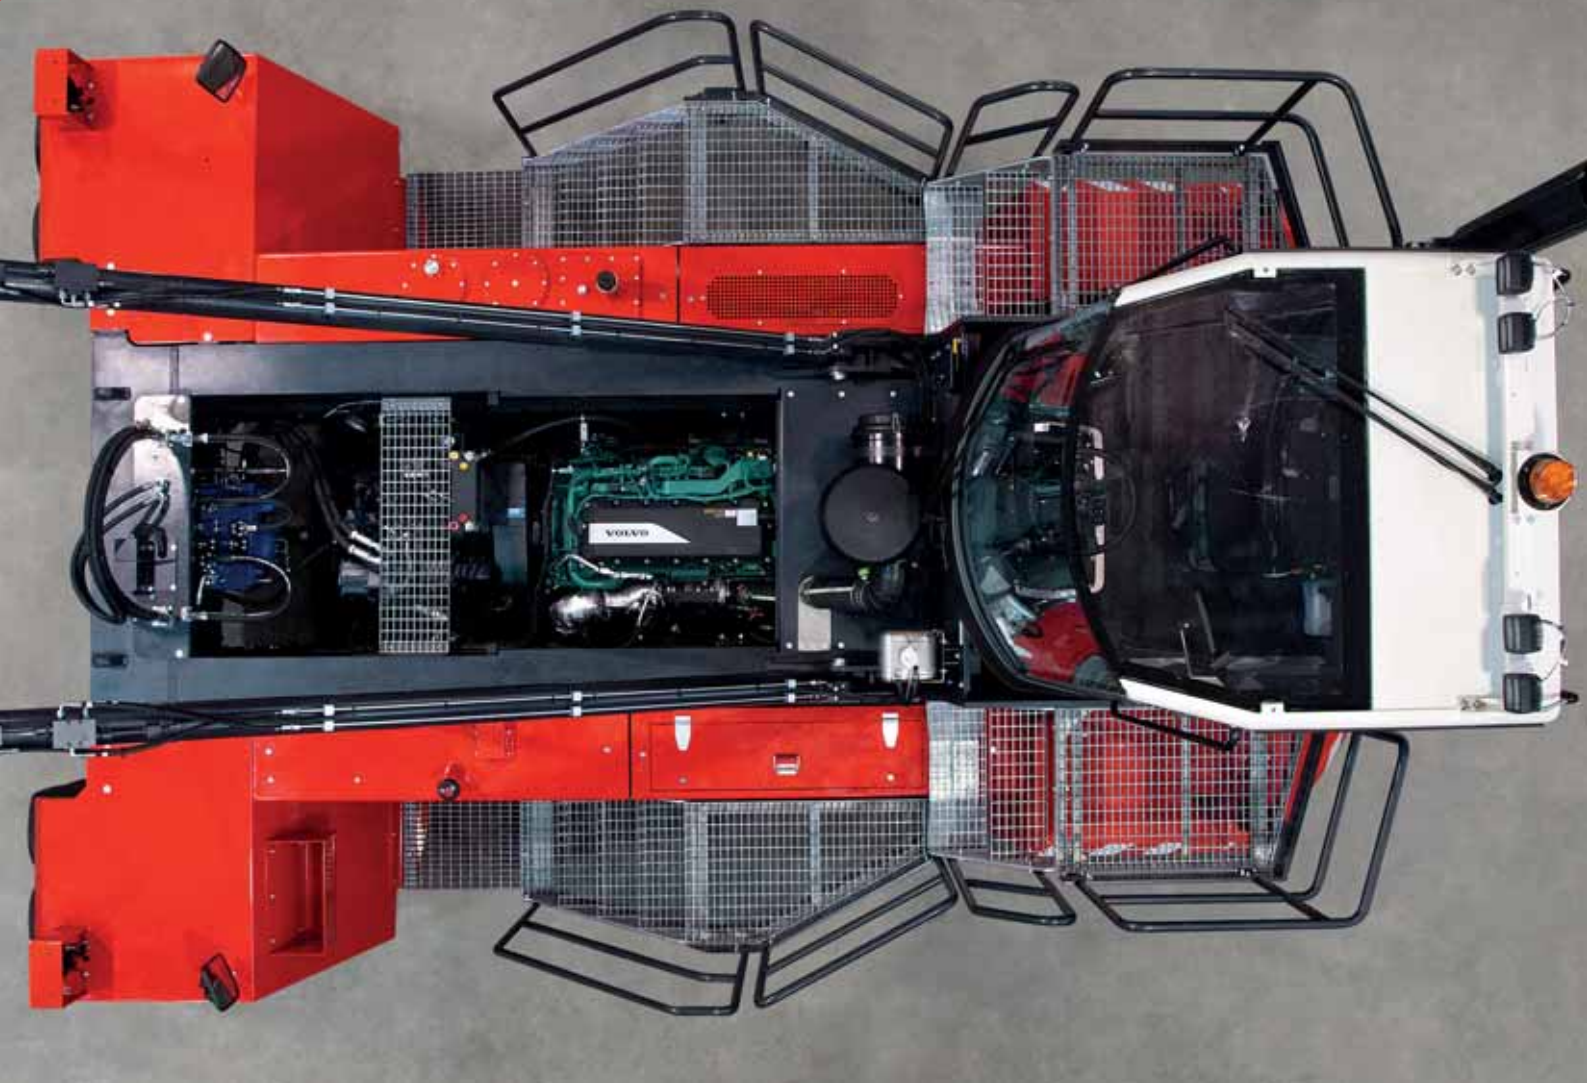

S E R I E S

The new ECH range of CVS FERRARI includes a series of Double Stack models that can handle two empty containers up to 10 Ton combined capacity, under a spreader featuring hydraulic powered pile slope and Visibility Window that allow the driver to see with naked eye the spreader hooks at any stacking height and spreader extension position. The optional mobile spreader heads and 2nd container backrests, make smooth and easy the insertion or removal of the hooks in and out the container corner castings in virtually any operational condition. The powerful side locking clamps then secure and align the two handled boxes making safe and easy the operators job as it has never been before Twist-Locks Cameras are an available option.

THE BEST OF THE BEST

The best machines are made off the best components. So the new CVS FERRARI ECH truck range features the most powerful, advanced and fuel efficient drive train and hydraulics in the marketplace, all CAN BUS controlled and managed by the CVS FERRARI on board computer system that optimizes performances, safety, machine organs protection and energy usage.

Reliability and ease of serviceability have been deeply considered in the development of the new CVS FERRARI ECH Range whose design and systems' lay-out ensure unrivaled accessibility. The ECH range utilizes a high proportion of well trusted components standardized throughout the CVS Ferrari range including our landmark electronically controlled hydraulics and the over-sized and pressurized hydraulic and cooling tanks.

CVS FERRARI

ECH SERIES

The super-wide front axle matched to the rear axle offering the widest track in the market deliver the best lateral stability in its class.

The all new CVS FERRARI Empty Container Handlers have the highest stability factor in the market, yet they are the sole and only to feature a load moment indicator and limiter, as we believe that safety is never enough. Likewise driver's comfort, for which our machines are equipped with the roomiest cab in class, also available with back tilt option.
